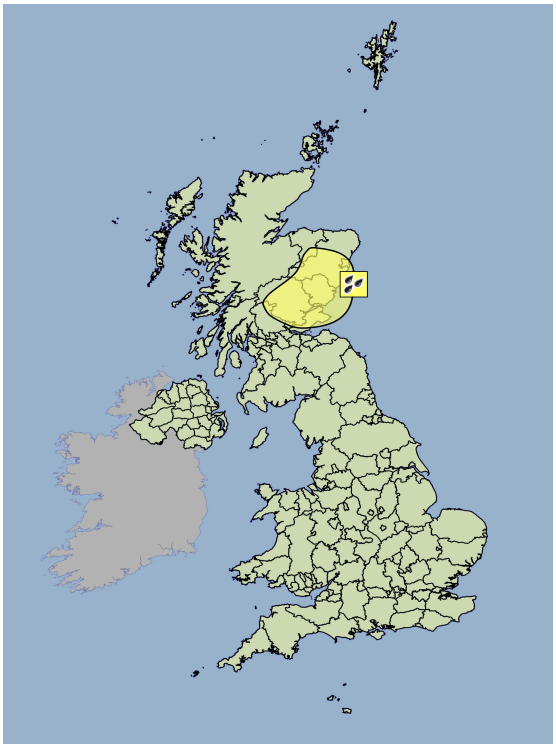
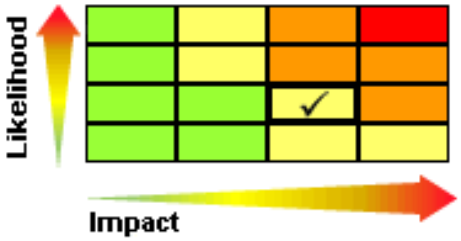
National Severe Weather Warning Service





Chief Forecasters Assessment
The slow moving frontal zone that continues to produce large rainfall totals will weaken later on Tuesday with rain (also hill snow) gradually becoming lighter. However, a further 10-20 mm of rain, locally 30 mm in the south of the warning area, is possible during the day.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **00:05 on Tue, 05th Jan 2016** until **23:55 on Tue, 05th Jan 2016**

Further rain is expected during Tuesday, falling as snow at times above 350-400 metres. Following the persistent and at times heavy rainfall of the preceding days, be aware of the risk of ongoing disruption from surface water flooding and to a lesser extent river flooding, as well as some disruption to transport.

This is an update to the Alert issued on Sunday, to extend the area into Fife for localised surface water flooding and also to extend the warning throughout Tuesday.
